ENGLISH PREMIER PEDIGREE SHOW AND SALE

GENERAL INFORMATION & SALE NOTES

LOCATION: The sale will be held at Newark Livestock Market, Great North Road, Newark, Nottinghamshire, NG24 1BY. Tel: 01636 676741, Fax: 01636 611190.
Email: enquiries@newarklivestocksales.com Website: www.newarklivestocksales.com

ACCOMMODATION: Please see a list of local Hotels and Bed & Breakfasts on page 4.

METHOD OF SALE: All Pedigree cattle will be sold in guineas (105 pence) and in strict catalogue order, unless any alterations are announced by the auctioneers.

COMMISSIONS: The Auctioneers will dutifully execute commission to purchase for buyers unable to attend the sale personally, upon the receipt of written instructions.

SETTLEMENT AND CLEARANCE OF STOCK: Settlement in full is due immediately at the close of the Sale. No animal may leave the Sale Premises without an official 'Pass Slip', obtainable only from the Auctioneers upon settlement. Purchasers unable to remove their stock on the day of sale can arrange overnight accommodation with the Auctioneers on the understanding that all cattle are at the Purchasers' risk.

REGISTRATIONS: All Pedigree stock in the sale are registered with the relevant breed society. Please see page 10 for contact details.

PEDIGREE TRANSFERS AND FEES: All animals are eligible for transfer at the purchasers' expense.

SEMEN ROYALTY SCHEME BULL REGISTER: Purchasers are asked to note that where a female is catalogued as being served/inseminated by a 'Semen Royalty' Sire the appropriate royalty will be payable by the purchaser prior to registration of the calf.

VETERINARY INSPECTION: For the buyer's convenience, a Veterinary Inspection will be carried out on all bulls for sale. A Veterinary Officer will examine general health and genetic defects particularly teeth, eyes, testicles, warts and locomotion. Any animal found with a genetic fault, disease or disorder will be rejected.

HERD HEALTH: As stated declared by the Vendor in this catalogue or from the rostrum.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

ANY ANIMAL NOT IN POSSESSION OF THE REQUIRED DOCUMENTS WILL NOT BE OFFERED FOR SALE WITHOUT THEIR RESPECTIVE PASSPORT DOCUMENTATION

Important Notice to Vendors

TIMETABLE OF EVENTS:

FRIDAY 17TH MARCH

ARRIVAL OF STOCK 9.00am to 7.00pm
INSPECTION OF BULLS 4.00pm to 6.00pm

SATURDAY 18TH MARCH

ARRIVAL OF STOCK 5.00am to 8.00am
INSPECTION OF BULLS 7.00am to 8.00am
JUDGING COMMENCES 8.30am
SALE COMMENCES 12.00pm

EVERY BULL entered for the Sale **MUST BE ADEQUATELY TRAINED TO BE LED BY HALTER**. All bulls must be provided with a serviceable halter, which will become the property of the Purchaser.

TATTOO MARKS/UK TAGS: All cattle entered for the Sale will have their tattoo marks/UK Tags examined as an integral part of the pre-sale inspection procedure. Any marks found to have faulty, incorrect or illegible marks will be **REJECTED** from the Sale. Vendors are therefore urged, in their own best interests, to examine the tattoo marks of Sale cattle before the animal(s) leave their holding so that faulty marks can be rectified in accordance with the required Society procedures.

The Sale will be held subject to the Auction Rules, Conditions of Sale.

The proceeds of Sale are guaranteed by the Auctioneers, who will account to Vendors on the day of the Sale. Such guarantee however, does not extend to the animals sold for export, to which special conditions apply.

STRAW: Straw will be provided by the Auctioneers free of charge.

ANIMAL WELFARE: Vendors and Purchasers should note the **CODE OF PRACTICE** published by the Livestock Auctioneers' Market Committee for England and Wales IS **OPERATIVE** and that weak, unhealthy or injured stock will be refused entry by the Auctioneers. Enquiries should be directed through the market office to the Auctioneers' **ANIMAL HEALTH & WELFARE OFFICER**.

IMPORTANT NOTICE TO PURCHASERS

1. This Sale is held subject to recommended Conditions of Sale of the National Beef Association.
2. This Sale is held subject to the Special Terms and Conditions of Sale recommended for Sales of Pedigree Beef Cattle by the National Beef Association. The preparation of these Terms and Conditions has proved a lengthy and costly process and, in order to defray the legal and other costs involved, and to provide a continuing source of revenue to assist the Association in its vital work for Pedigree Cattle Breeders, the Council of the Association has decided that a special levy, amounting to £4 per male and £2 per female head/lot sold (plus VAT) shall be charged to each Purchaser.

This levy will be imposed at this Sale and added to the Purchasers' accounts.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

QR CODES

In this catalogue we have printed QR code for each Salers and Aberdeen Angus animal, this will take you to the web page which will give you full information on pedigree, bar charts and photographs if available

Step 1

Download and install a QR code app on your smartphone if you don't yet have one. Open your App Store, Market, Marketplace or App World application (for the iPhone, Android, Windows Mobile and BlackBerry platforms, respectively).

Step 2

Search for "QR code reader," and then download and install a free app. The app should be named something to the effect of "QR Code Scanner" or "QR Scanner." There are paid versions of these kinds of apps, but the free ones work just as well.

Step 3

Open the QR barcode app on your smartphone, and choose "scan from camera" or "scan QR code" from the main menu. A new window should open with a square in the middle of it.

Step 4

Center the QR code in the middle of the square that's currently displayed by your QR barcode app. The app should automatically take a picture of the QR code for you when it has finished scanning the code. A new pop-up menu will appear, with the QR code information on it.

Step 5

Click the link that was embedded in the QR code, this will direct you to the Society website.

- Lepto accredited since 2015
- Lepto herd testing since 2015
- Johnes risk level 1, consecutive 6 years

Lot: 1

Rigel Pedigree

(Rigel)

Leven Fields, Middleton on Leven, Yarm, N Yorkshire, TS15 0JX

- Herd tested clear from TB March 2015
- Currently on a 4 year testing interval
- Member of Hi Health Scheme
- BVD accredited since 2010
- BVD vaccinated sale animals
- IBR herd surveillance testing
- IBR vaccinated sale animals
- Lepto herd surveillance testing
- Johnes risk level 1, consecutive 4 years

Lots: 2, 3

Explanation of Johne's Disease Risk Levels

Level 1

This is directly equivalent to the previous CHeCS Accredited free status. Level 1 status is associated with the lowest risk source when buying in stock. Health plan required.

Level 2

Herds with level 2 status have had one or two clear consecutive herd tests. Health plan required.

Level 3

Herds with level 3 status have reactors identified at the annual herd test, but these are no more than 3% of the animals tested. Health plan required.

Level 4

Herds with level 3 status have reactors identified at the annual herd test, and they amount to more than 3% of the animals tested. Health plan required.

Level 5

Any herd that is not carrying out the required testing or does not have a suitable health plan in place automatically falls into this category. Level 5 status is considered to be the greatest risk source when buying in stock.

Disclaimer: The health information above is as supplied by or on behalf of the breeder. The health status of individual animals may differ from the herd declaration. The responsibility for the accuracy of the information rests solely with the breeder and not The Salers Cattle Society of the UK.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

UNDERSTANDING THE BREEDPLAN PERFORMANCE RECORDING INFORMATION IN THIS CATALOGUE

Only Salers GROUP BREEDPLAN EBVs with Accuracy (Acc) can be validly compared between herds.

ESTIMATED BREEDING VALUES (EBVs)

The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or it's relatives. Accuracy below 75% should be considered low.

CALVING EASE

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny.

DTRS: Daughter's calving ease indicates how well the animal produces daughters that have easier calving.

BIRTH AND FERTILITY

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to easier calving and increased growth after birth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation with age of puberty in female progeny.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

GROWTH

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

FAT: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

The Salers Cattle Society GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Salers Cattle Society nor the ABRI oversee or audit the collection of this data.

Kentucky combines strong growth rates and excellent conformation from his sire Casimir, with a depth of maternal traits from his dam, who goes back to Rigel Byron Poll and Amazonien, both noted for large pelvic area, so Kentucky is ideal for breeding strong stores or replacement heifers.

BVD and IBR vaccinated. TB4 (last herd test March 2015). The herd is a member of the Biobest Hi-Health Scheme, accredited for BVD, Risk Level 1 for Johnes, and routine testing for IBR and Lepto. The herd is also performance recorded (Breedplan). For more information visit www.rigelpedigree.co.uk.

Heterozygous polled. Krug combines Casimir and Othello traits, low birth weight, large pelvic area and strong growth rate. Ideal for breeding strong stores or replacement heifers. His sire, Rigel Picasso is breeding tremendous bulls.

BVD and IBR vaccinated. TB4 (last herd test March 2015). The herd is a member of the Biobest Hi-Health Scheme, accredited for BVD, Risk Level 1 for Johnes, and routine testing for IBR and Lepto. The herd is also performance recorded (Breedplan). For more information visit www.rigelpedigree.co.uk

ENGLISH PREMIER PEDIGREE SHOW AND SALE

UNDERSTANDING THE BREEDPLAN PERFORMANCE RECORDING INFORMATION IN THIS CATALOGUE

Only Aberdeen-Angus GROUP BREEDPLAN EBVs or INTERIM EBVs with Accuracy (Acc) can be validly compared between herds.

ESTIMATED BREEDING VALUES (EBVs)

The EBV is the best estimate of an animal's genetic merit for that trait.

ACCURACY

An accuracy value (Acc) is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

CALVING EASE

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny. Using a bull in the Top 1% for CE direct (+5.3) is predicted to result in approximately 15% fewer assisted calvings in 2 year old heifers compared with using a bull in the Bottom 1% (-10.5). This range is predicted to be smaller in cows. **Remember that the dam's genetics and management are significant factors influencing calving ease in any mating.**

DTRS: Daughter's calving ease indicates how well the animal produces daughters that have easier calving.

BIRTH AND FERTILITY

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to easier calving and increased growth after birth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. There is also a small negative correlation with age of puberty in female progeny.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

GROWTH

MILK: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MWT: Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

FAT: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

Indexes combine the EBVs with economic information for specific market and production systems to rank animals based on relative profit values.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

Terminal index

The Angus Terminal index is aimed at a commercial herd using Angus bulls over dairy cross cows to breed steers and heifers to turn off at 16 months of age. All progeny are destined for slaughter and no replacement females are selected from within the herd. There is some emphasis on calving ease while finishing steers at around 600 kg live weight (330 kg carcass weight) using a pasture based production system.

Use this index in a commercial herd to produce progeny for slaughter. The index has moderate emphasis on easier calving (ie getting a live calf with minimal human interference) while producing calves that will then grow quickly to market specifications at around 16 months of age. The index is focused on slaughter animals and does not account for maternal traits and is therefore not suited to breeding replacement females.

If you are using smaller framed cows or heifers in your herd, then you should also put extra emphasis on a higher Calving Ease Direct EBV when selecting a sire using this index.

Self Replacing index

The Angus Self Replacing index is aimed at an Angus herd selecting replacement females from within the herd while breeding steers and excess heifers to turn off at 18 months of age. There is emphasis on calving ease and maternal traits while also looking to finish steers for slaughter at around 615 kg live weight (330 kg carcass weight) using a pasture based production system supplemented with extra rations during the finishing phase.

This Self Replacing index is also suitable to using Angus sires over mixed breed cows where replacement females are sourced from within the herd. There may be some hybrid vigour expressed in the progeny depending on the breed type of the cows used. Therefore you should consider placing extra emphasis on the Calving Ease EBVs (more positive) of the sire to allow for possible heavier birth weights of his calves due to hybrid vigour.

Use this index in both commercial and pedigree herds where you are balancing the requirements of selecting replacement females while also producing animals for slaughter.

<p>The Aberdeen-Angus GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Aberdeen-Angus Cattle Society nor the ABRI oversee or audit the collection of this data.</p>

All bulls entered at official Society sales have their Myostatin status displayed in the catalogue.

The Myostatin nt821 gene is responsible for double muscling.

Myostatin Status No Carrier, means the bull does not carry the Myostatin nt821 gene.

Myostatin Status Single Version Carrier means the bull carries a single version of the Myostatin nt821 gene, but still accepted for registration by the Aberdeen-Angus Cattle Society

Disclaimer: The health information above is as supplied by or on behalf of the breeder. The health status of individual animals may differ from the herd declaration. The responsibility for the accuracy of the information rests solely with the breeder and not The British Simmental Cattle Society Ltd.

UNDERSTANDING THE BREEDPLAN PERFORMANCE RECORDING INFORMATION IN THIS CATALOGUE

Only British Simmental GROUP BREEDPLAN EBVs or INTERIM EBVs with Accuracy (Acc) can be validly compared between herds.

ESTIMATED BREEDING VALUES (EBVs)

The EBV is the best estimate of an animal's genetic merit for that trait and they are to be used as a tool to assist in the selection of sires, **the visual appearance remains very important.**

ACCURACY

An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or it's relatives.

CALVING EASE

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

DIR: Direct calving ease indicates how this animal influences the birth of its progeny.

Calving Ease (DIR) EBVs are estimates of genetic differences in the ability of a sire's calves to be born unassisted from **2 year old heifers.** The EBVs are reported as differences in the percentage of unassisted calvings.

Higher, more positive, Calving Ease (DIR) EBVs are more favourable. For example, a bull with an EBV of +5.0% would be expected, on average, to produce 3% fewer difficult calvings **from 2 year old heifers** than a bull with an EBV of -1.0% (6% difference between the sires, then halved as they only contribute half the genetics). **Cow condition is a significant factor on the ability and ease of calving.** Continued use of sires with easy calving may reduce the size of the cows and average pelvic area in the herd

ENGLISH PREMIER PEDIGREE SHOW AND SALE

DTRS: Daughter's calving ease indicates how well the animal produces daughters that have easier calving.

Calving Ease (DTRS) EBVs are estimates of genetic differences in the ability of a sire's daughters to calve at 2 years of age without assistance. The EBVs are also reported as differences in the percentage of unassisted calvings.

Higher, more positive, Calving Ease (DTRS) EBVs are more favourable. For example, a bull with an EBV of +4.0% would be expected to on average produce daughters that have 3% less calving problems when calving at 2 years of age than the daughters of a bull with an EBV of -2.0%.

BIRTH AND FERTILITY

GL: Gestation Length EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation lengths which generally relate to easier calving and increased growth after birth. For example, a bull with a Gestation Length EBV of -2 days would be expected to produce calves that are born earlier, and more easily, than a bull with a Gestation Length EBV of +2 days.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers. Birth Weight EBVs are expressed in kilograms (kg) and are calculated based on weights of calves taken at birth. Small, or moderate, Birth Weight EBVs are more favourable. For example, a bull with a Birth Weight EBV of +2 kg would be expected to produce lighter calves at birth than a bull with a Birth Weight EBV of +6 kg, with a lower risk of a difficult birth.

Please note, whilst low Birth Weight EBVs are favoured for calving ease they are also generally associated with lower overall growth potential. Consequently, birth weight and growth need to be carefully balanced. Fortunately, animals can be found that have both moderate Birth Weight EBVs and above average EBVs for later growth.

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. Increased scrotal circumference is associated with increased semen production in bulls, and earlier age at puberty of bull and heifer progeny. Increased scrotal circumference also has a favourable relationship with days to calving, such that bulls with larger scrotal circumference tend to have daughters with shorter days to calving. For example, a bull with a Scrotal Size EBV of +4 cm would be expected to produce sons with larger testicles at yearling age and daughters that reach puberty earlier than the progeny of a bull with a Scrotal Size EBV of -4 cm.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

GROWTH

MILK: 200 Day Milk EBVs are estimates an animal's maternal effect on the 200 day weight of its calf. In the case of sires, this estimates the maternal effect that his daughters will have on the 200 day weight of their progeny. The 200 Day Milk EBV is expressed as kilograms (kg) of calf live weight at 200 days (ie. the expected difference in the weight of the calf at 200 days due to the maternal effect (milk) of the cow). The 200 Day Milk EBV is calculated by partitioning the difference in the 200 day weight of calves into growth and milk components.

The optimum level of milk production potential among beef cows is dependent upon the production system and environment in which the cows are run. Selection for increased milk production may be warranted when cows are run under good nutritional conditions and calves are sold as weaners. However, some environments may not support high milking cows.

Larger, more positive, 200 Day Milk EBVs are generally more favourable, depending on the environment. For example, a bull with a 200 Day Milk EBV of +15 kg would be expected to sire daughters with higher milk production than a bull with 200 Day Milk EBV of +5 kg. This higher milk production potential should be reflected through higher weaning weights among the daughter's calves.

200: 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400: 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600: 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

CARCASE

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals. Larger, more positive, EMA EBVs are generally more favourable. For example, a bull with an EMA EBV of +4 cm² would be expected to produce steer progeny with a greater degree of muscle expression than a bull with an EMA EBV of +1 cm².

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

Terminal Index

The BSCS Terminal index is aimed at a commercial herd using Simmental bulls over large framed, mixed breed cows to breed steers and heifers to turn off at 16 months of age. All progeny are destined for slaughter and no replacement females are selected from within the herd. There is some emphasis on calving ease while finishing steers at around 630 kg live weight (335 kg carcase weight) using a pasture based production system supplemented with extra rations during the finishing phase.

Use this index in a commercial herd to produce progeny for slaughter. The index has moderate emphasis on easier calving (ie getting a live calf with minimal human interference) while producing calves that will then grow quickly to market specifications at around 16 months of age. The index is focused on slaughter animals and does not account for maternal traits and is therefore not suited to breeding replacement females.

If you are using smaller framed cows or heifers in your herd, then you should also put extra emphasis on a higher calving ease direct EBV when selecting a sire using this index.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

Self Replacing Index

The BSCS Self Replacing index is aimed at a Simmental herd selecting replacement females from within the herd while breeding steers and excess heifers to turn off at 16 months of age. There is emphasis on calving ease and maternal traits while also looking to finish steers for slaughter at around 680 kg live weight (350 kg carcass weight) using a pasture based production system supplemented with extra rations during the finishing phase.

This Self Replacing index is also suitable to using Simmental sires over mixed breed cows where replacement females are sourced from within the herd. There may be some hybrid vigour expressed in the progeny depending on the breed type of the cows used. Therefore you should consider placing extra emphasis on the Calving Ease EBVs (more positive) of the sire to allow for possible heavier birth weights of his calves due to hybrid vigour.

Use this index in both commercial and pedigree herds where you are balancing the requirements of selecting replacement females while also producing animals for slaughter.

The British Simmental GROUP BREEDPLAN Estimated Breeding Values contained in this Sale Catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the British Simmental Cattle Society nor the ABRI oversee or audit the collection of this data.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

Understanding the new EBV Graph

The BSCS is moving to a new graph for pen cards for all animals at Society sales. The new graph has been available for some time as part of the Breedplan package used for performance recording and includes more detailed information on individual EBV values compared to the old graph. The new graph allows the buyer to see clearly where the animal's individual traits fall in relation to breed average and also include the accuracy value.

Of course, as the EBV takes into account all the pedigree and performance information that is available at this point in time, the EBV is also the most reliable indication available of the animals breeding value for each trait at this point in time.

Within the display of the EBV Graph:

- The actual EBV Accuracy for each trait is shown at the right side of the graph.
- The Breed Avg values are listed in the centre of the graph and reflect the average EBV's of current animals within the breed (ie. all 2 year old animals).
- The minimum and maximum EBV values are displayed at the left and right of the graph for each trait represented
- The horizontal bar (shaded/coloured area) displays where the animal is placed in relation to the current animals within the breed for each trait.
- As an illustration of the interpretation of the EBV graph, in the example below the animals 400 Day Wt EBV is of higher accuracy than the Eye Muscle Area EBV (because it's horizontal bar is much narrower) and so there is less possible change in the 400 Day Wt EBV as additional information becomes available. Conversely, the EMA EBV may change when additional information becomes available.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

Female Classification

As from the autumn of 2016 the BSCS introduced a female classification programme which is voluntary for all breeders. The classification is split in to four categories; 1, Body confirmation 2, Beef character 3, Legs & feet 4, Mammary.

Classification assessments are carried out by independent assessors and will help ensure the best females which are structurally correct are used in breeding programmes.

Females which are classified will have the details next to their name in the catalogue, see examples below:

Williams Verona Bellatrix **VG 87**

Further information is available at www.britishtsimmental.co.uk or on the animal database using the PR codes displayed in the sale catalogue or at the animal's pen

Williams Verona Bellatrix **VG 87**

**Classified: VG 87 on 18/10/2016 No. of Calves 4 Composite Scores:
Body 88, Beef 82, Legs 86, Mammary 90, Stature 7, Chest Width 6,
Body Depth 7, Rump Angle 4, Rump Width 7, Legs Side-View 6
Legs Rear-View 7, Foot Angle 5, Locomotion 7, Udder Fore-
Attach 7, Udder Depth 4, Teat Length 5**

(example of classification data as displayed on the Simmental database)

Heathbrow Governor combines two great cow families in the breed ie, **Darsham Kitkat** and **Hockenhull Girlie 22nd (F073488)**. His sire, never beaten in his class, was SE Simmental of the Year 2014. He is now stock bull in the Ravensdale Herd; his progeny at Heathbrow are quite exciting. His dam Girlie 22 as purchased for 9,000gns at the hockenhull dispersal sale. She has bred a great daughter in the Vale Royal herd and has bred consistently well at Heathbrow. His brother Hockenhull Waterloo made 16,000gns at Stirling (sire of Capercaille who sold for a breed record of 45,000gns). This is a real breeder's bull.

ENGLISH PREMIER PEDIGREE SHOW AND SALE

DISPERSAL SALE ON BEHALF OF DC MITCHELL

We have been farming cattle for four generations in Norfolk.

The pedigree Simmental foundation cows for the herd were purchased in mid 70's.

The herd has always been ran commercially with all cows in good working condition.

Over the last 40 years stock has been supplied to start several commercial and pedigree herds all over the country. The purchased cattle have gone on to do well giving us a healthy flow of repeat custom.

In the 80's and 90's ('the good old days') we conjured up a number of championships at local prime stock/fat stock shows and sales.

Over recent years we have proved that a commercially ran herd of cattle can have champion crudentials, by winning championships at renowned shows and sales such as Great Yorkshire show and Stirling Bull sales.

We have purchased a number of bulls from Perth bull sales and the Carlisle bull sales. We have carefully selected each sire for particular traits yet keeping the 'commercially ran' aspect of our herd very much at the forefront of our minds.

We thank you for your interest in our cattle and look forward to seeing you on the day.

Dennis Mitchell

LINCOLN RED CATTLE SOCIETY

President: Graham Parkinson

Any queries prior to Sale Day should be directed to our Secretary: **Jayne Borrows**,
Lincoln Red Cattle Society, Grange de Lings, Lincoln, LN2 2NA
Telephone: 01522 511395. Email: secretary@lincolnredcattlesociety.co.uk

DETAILED PEDIGREES WILL BE AVAILABLE FOR INSPECTION IN THE AUCTIONEER'S OFFICE AT THE SALE.

VETERINARY TESTS FOR EXPORT:

Potential buyers from overseas or potential purchasers for clients overseas are required to contact Newark Livestock Market regarding the cost and responsibility for the preparation of animals for export.

HERD HEALTH STATUS:

All animals in the catalogue are either:

- i) Accredited disease free **or**
- ii) Blood tested free of Bovine Viral Disease, Leptospirosis, Infectious Bovine Rhinotracheitis and Johnes Disease not more than 3 months prior to Sale and vaccinated where indicated. Test results available at the Sale.
- iii) Where required animals forward will be pre-movement TB tested.

BEEF RECORDING:

Weights are officially recorded by Signet where indicated.

The Society does not accept any responsibility for any statement made or views expressed in the notes appended to pedigrees in this catalogue concerning the animal offered for sale, their progeny or their forebears.

Important Notice to Prospective Purchasers:

All Lots MUST be settled on the day of purchase

NB: minimum Upset Prices: Bulls 1,800 Gns; In-calf Heifers 1,000 Gns & Maidens 750 Gns

When you purchase Lincoln Red Cattle:

Please collect the animal's Pedigree Certificate from our Secretary who will be in the Auctioneer's Office during the Sale. To transfer the animal(s) into your Herd, detach the Transfer Certificate from the bottom of the Pedigree Certificate and either hand it to our Secretary along with the transfer fee(s) at the Sale, or post with a cheque to the Lincoln Red Cattle Society. Our transfer fee is £12.00/animal (incl of VAT).

We welcome new members to our Society and in order to register your Lincoln Reds you need to be a member. For more information please speak to our Secretary.

gs: St. Fort Essex (XP4115)
Dam : Hemingby Polly K469(XP91377)
gd: Hemingby Polly E185 (XP19281) (93.75%)

Hemingby Kingston was shown successfully in 2016, winning first prize and Reserve Male Champion at the Woodhall Spa and Rutland Shows.

Dam: Hemingby Polly K469 also bred Hemingby Friar sold to the Flimston Herd in Glamorgan and is from an excellent bull breeding line in the Herd.

His Beef EBV weight recorded figure is 31, in the top 10% for the Breed.

Sire: Auchmacoy Oakley has been a great stock bull in the Hemingby Herd for the last 4 season and also sired Hemingby Treasure T937, Junior Champion at the Lincolnshire Show 2015.

He has been semen tested with excellent results.

Dam : St. Fort Thora (Twin) L736(XP91359)

gd: Hundleby Thora G8 (XP19847)

St. Fort Union Jack is a great prospect as a stock bull.

Sire: Wragby Minstrel XP80259 won many shows as a Junior Bull before becoming our stock bull at St. Fort.

He stood Reserve Champion Male to St. Fort Rolex at the Great Yorkshire Show.

Dam: St. Fort Thora L736 XP91359 comes from a very special female line with Brooks Thora 119th & St. Fort Guvnor in her pedigree.

He has a very useful 1.4kg LWG from birth. We think this bull, with his correct dark red coat and conformation will influence his offspring and benefit all Pedigree herds.

DNA Ref: B599693. Myostatin Status: non carrier
